

ABSTRACT

A device holder for an electronic toll pass device for use in a vehicle. The device holder has a rear panel, a front panel, a base panel, and side plates. The base panel and side plates are connected to the front panel, base plate and rear panels and define an opening adapted to removably receive and retain an electronic toll pass device. Attached to the rear panel is a mounting apparatus for attaching the device holder to a vehicle. Attached to the front panel is a retaining device. The retaining device is adapted to store items including information cards, coin holders, eyeglasses, and papers.
